

Reaction Mechanism

(CHEM-563)

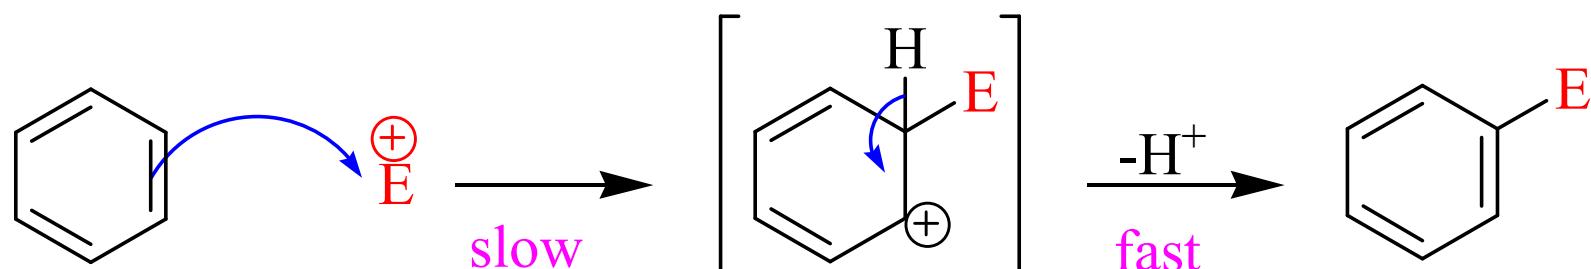

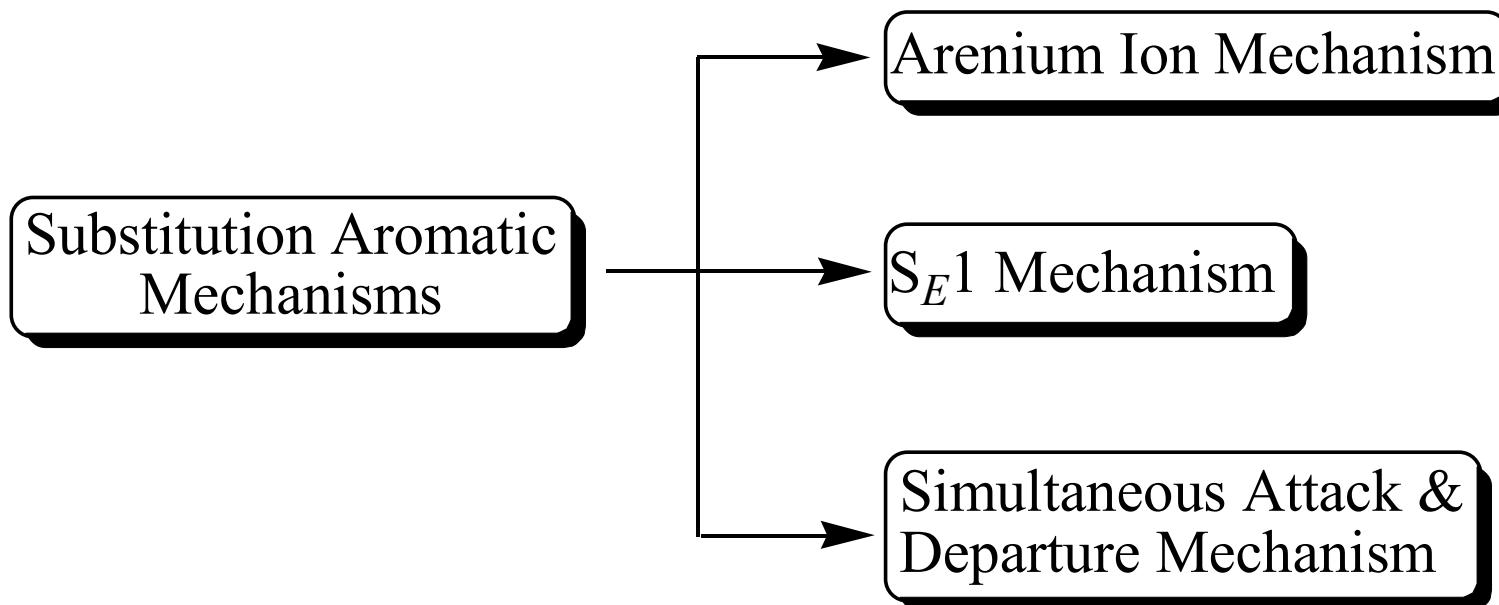

Online Lecture-13 (Week-5)

Dr Abdul Rauf Raza
(Associate Professor)
Department of Chemistry
University of Sargodha, Sargodha

Substitution Reactions

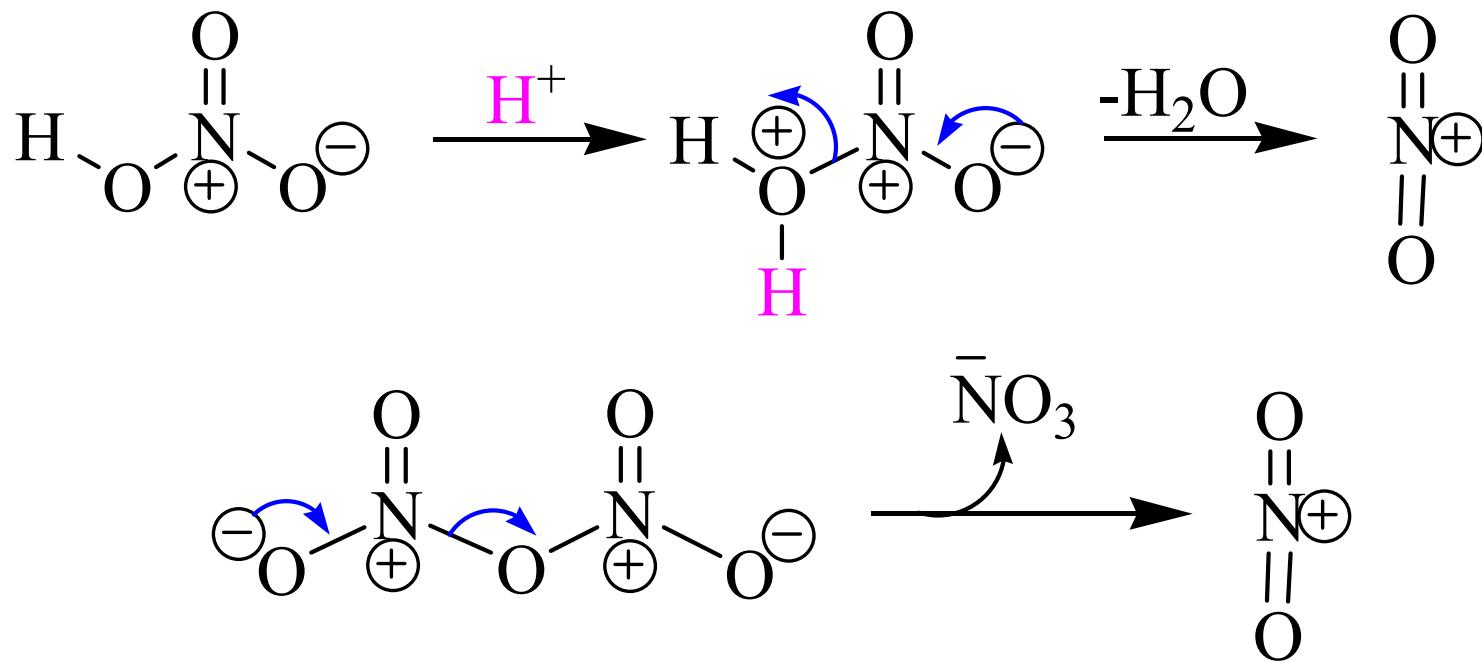

Arenium Ion Mechanism

$\text{E} = {}^+\text{NO}_2, \text{HSO}_3^+, \text{X}^+, \text{R}^+, \text{RCO}^+$ etc.

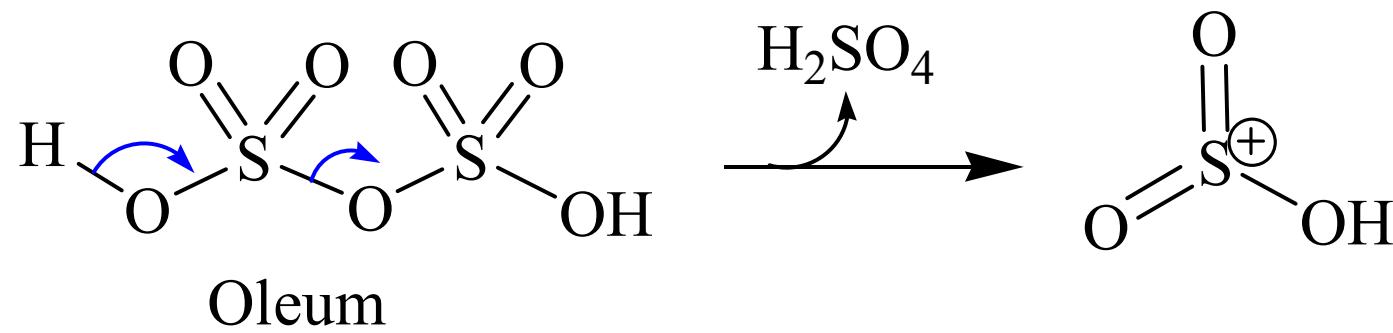

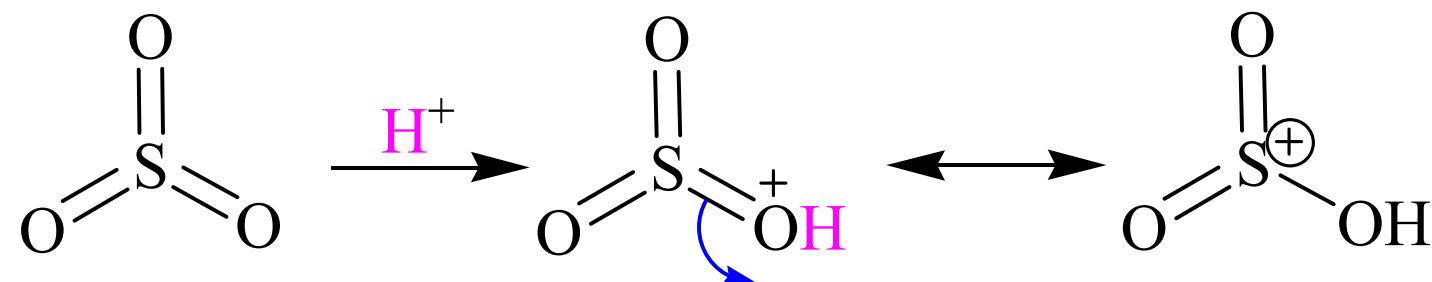

σ -Complex
Arenium Ion
Wheland Intermediate

Nitration

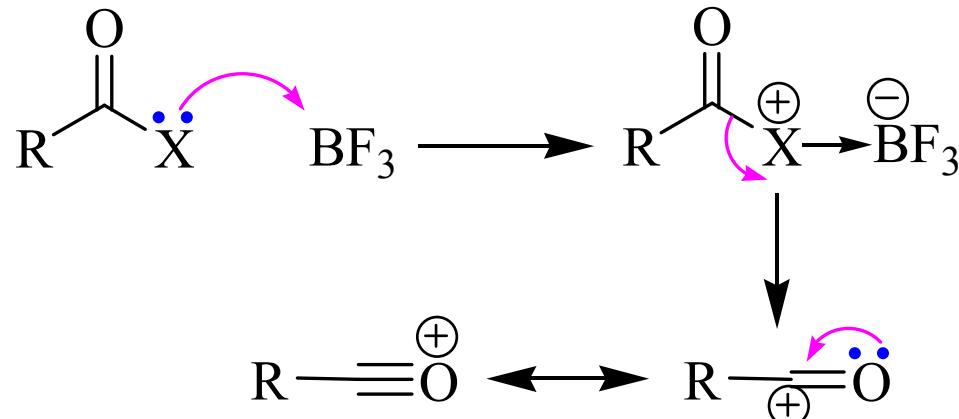

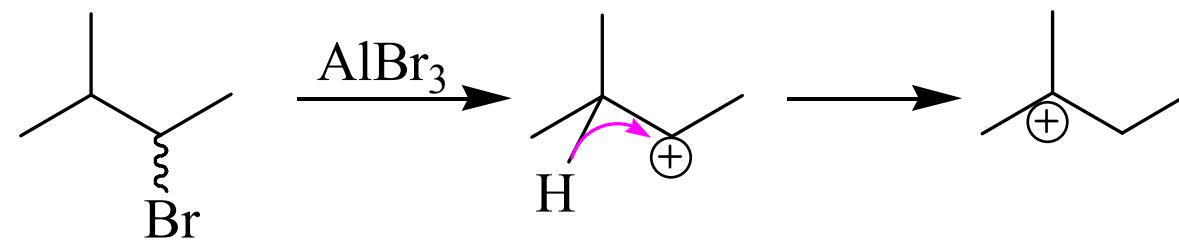

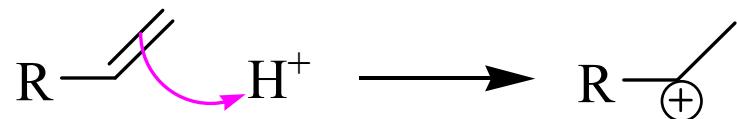

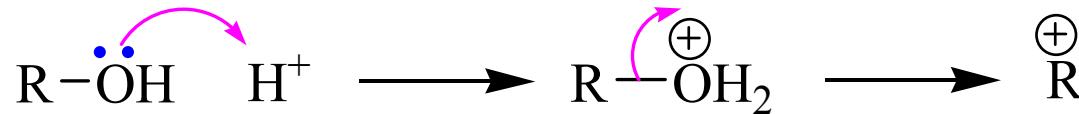

1. HNO_3
2. $\text{HNO}_3 + \text{H}_2\text{SO}_4$
3. $\text{HNO}_3 + \text{MeCOOH}$
4. N_2O_5
5. $[\text{NO}_2^+] \text{--SbF}_6^-$, $[\text{NO}_2^+] \text{--BF}_4^-$, $[\text{NO}_2^+] \text{--PF}_6^-$

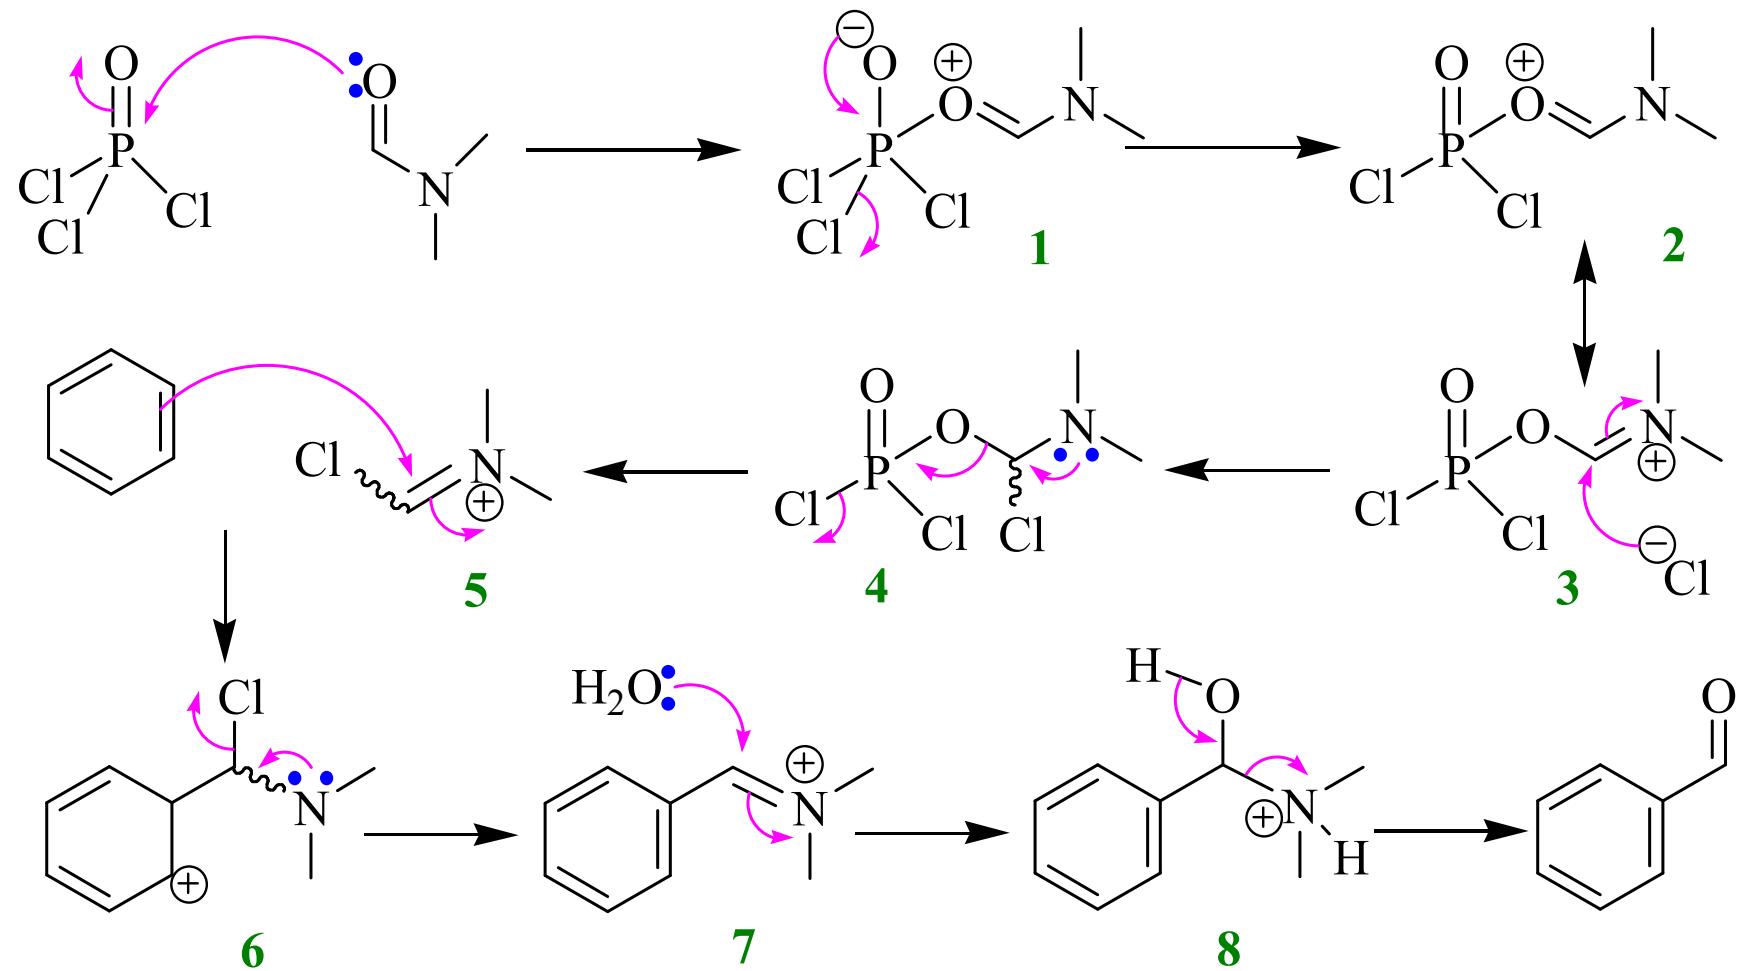

Sulphonation

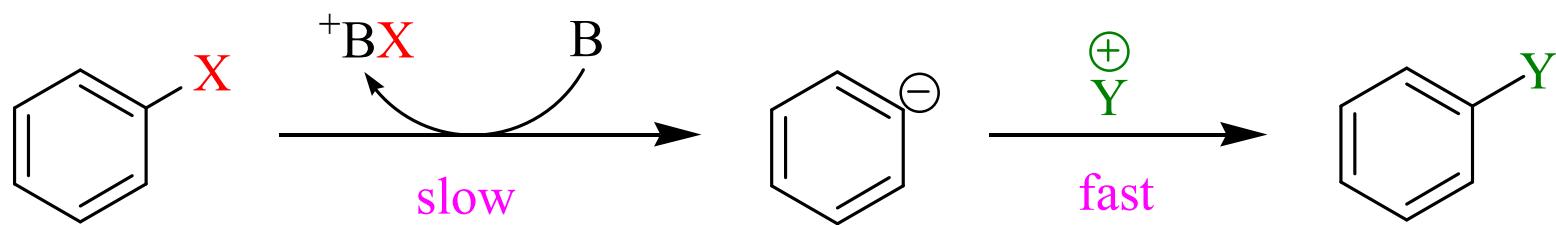

Friedle-Craft Alkylation / Acylation

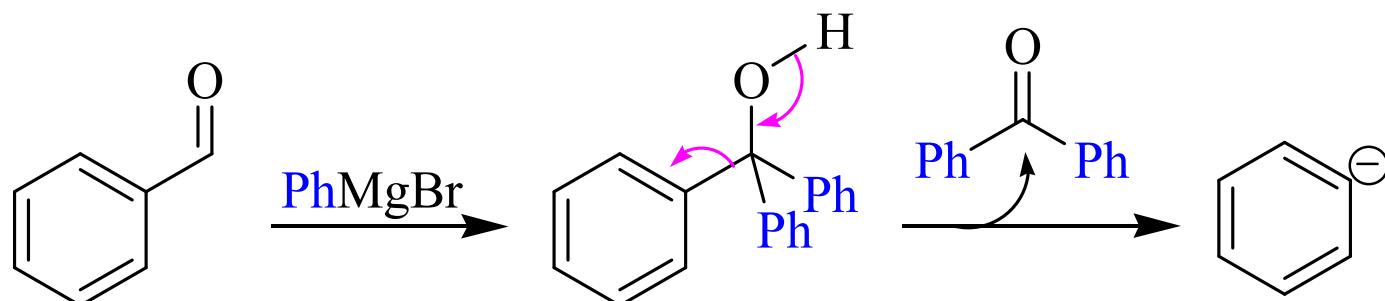

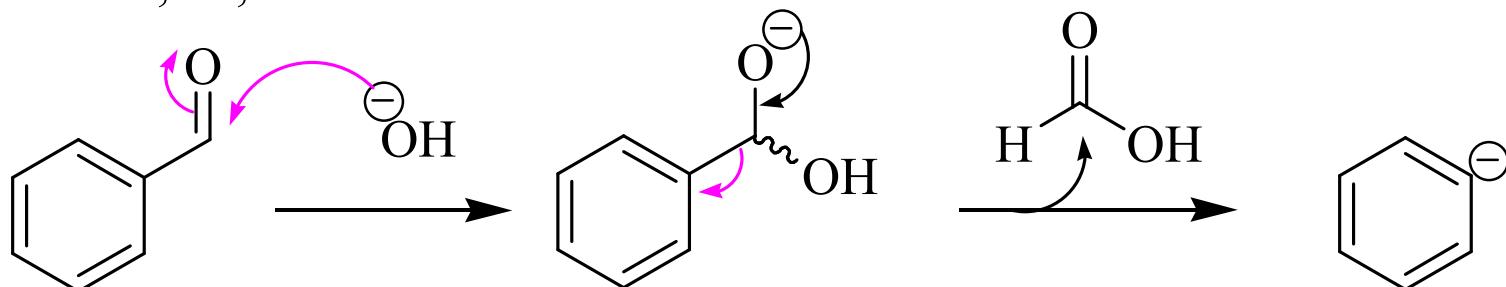

Formylation (Vilsmeier-Haak)

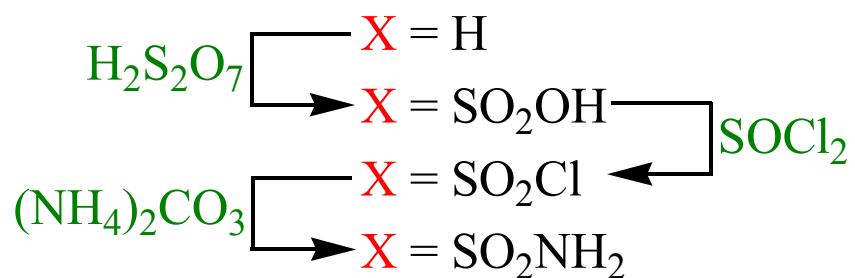

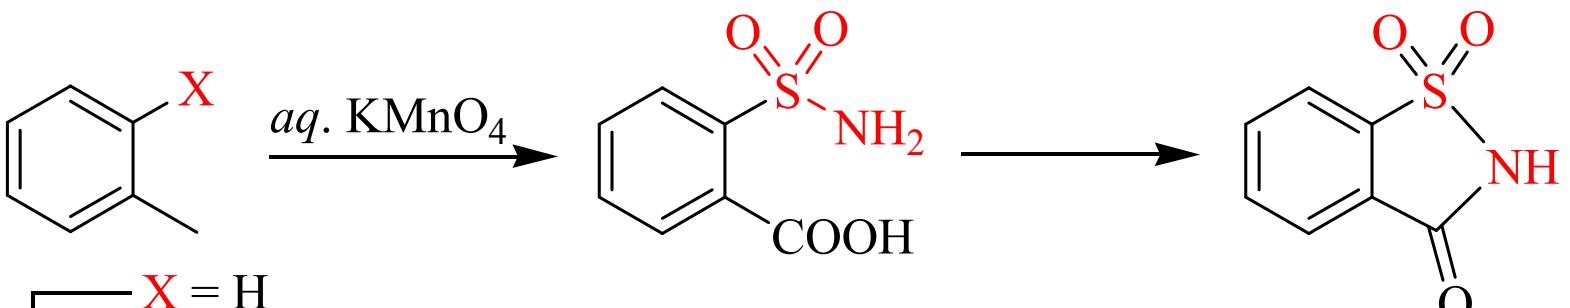

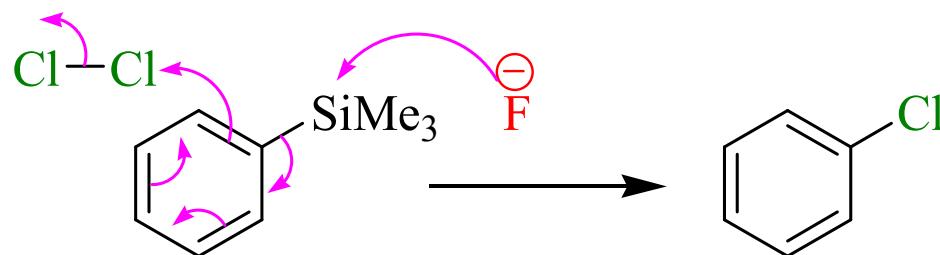

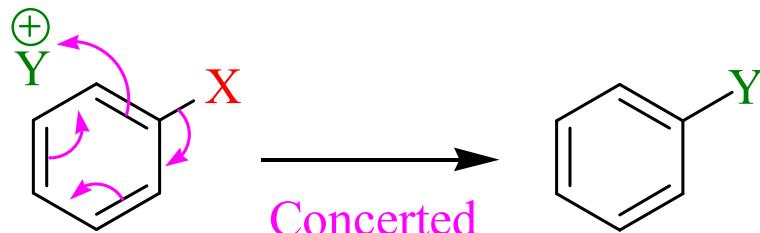

S_E1 Mechanism

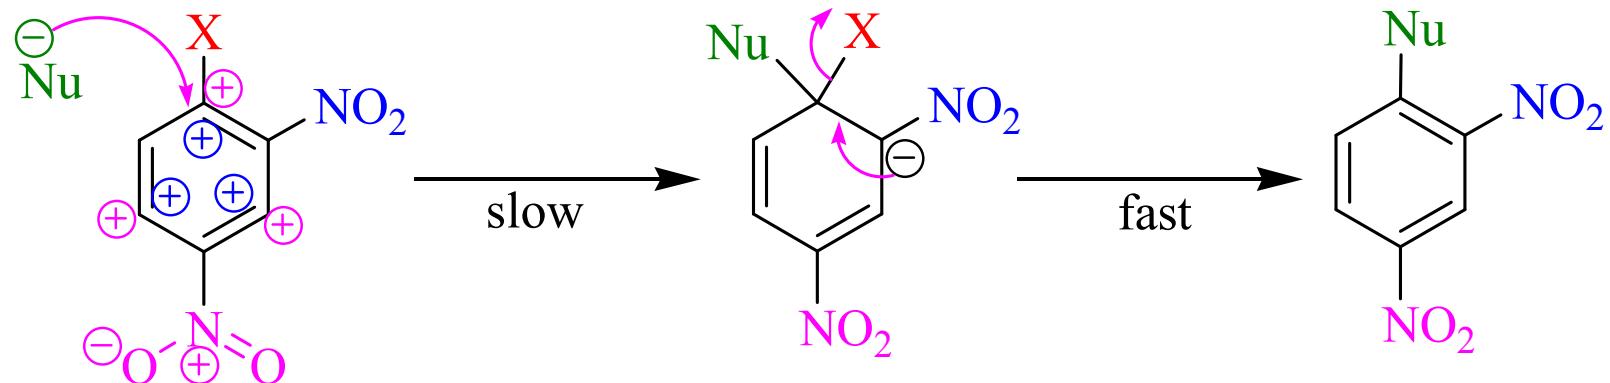

$X = \text{Cl}, \text{Br}, \text{I}$

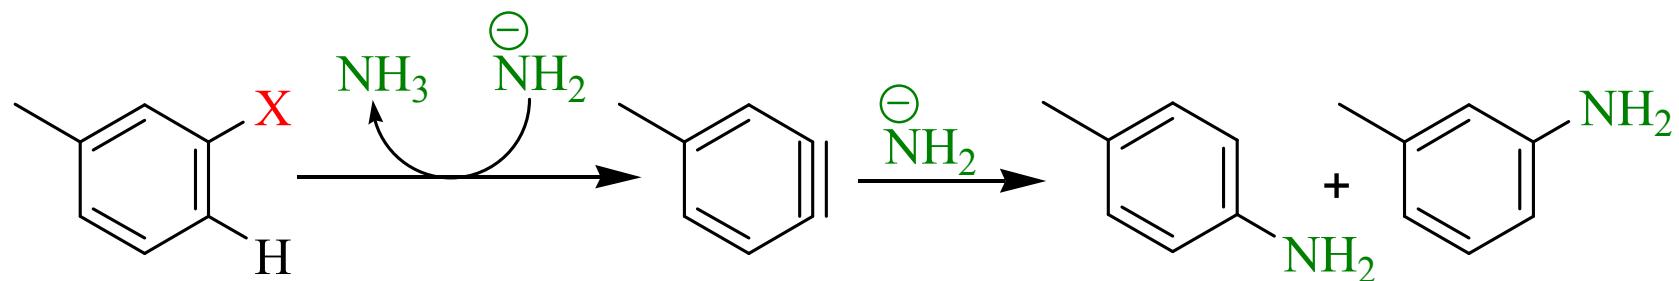

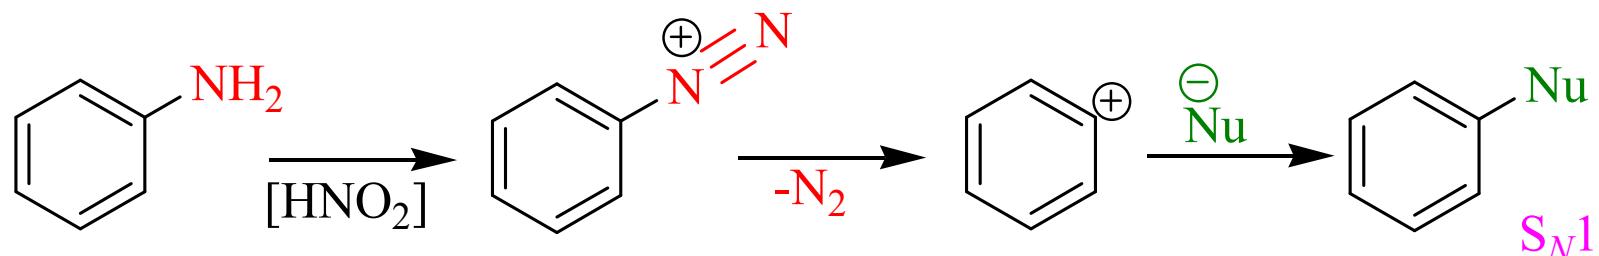

Simultaneous Attack & Departure

Substitution Aromatic Nucleophilic

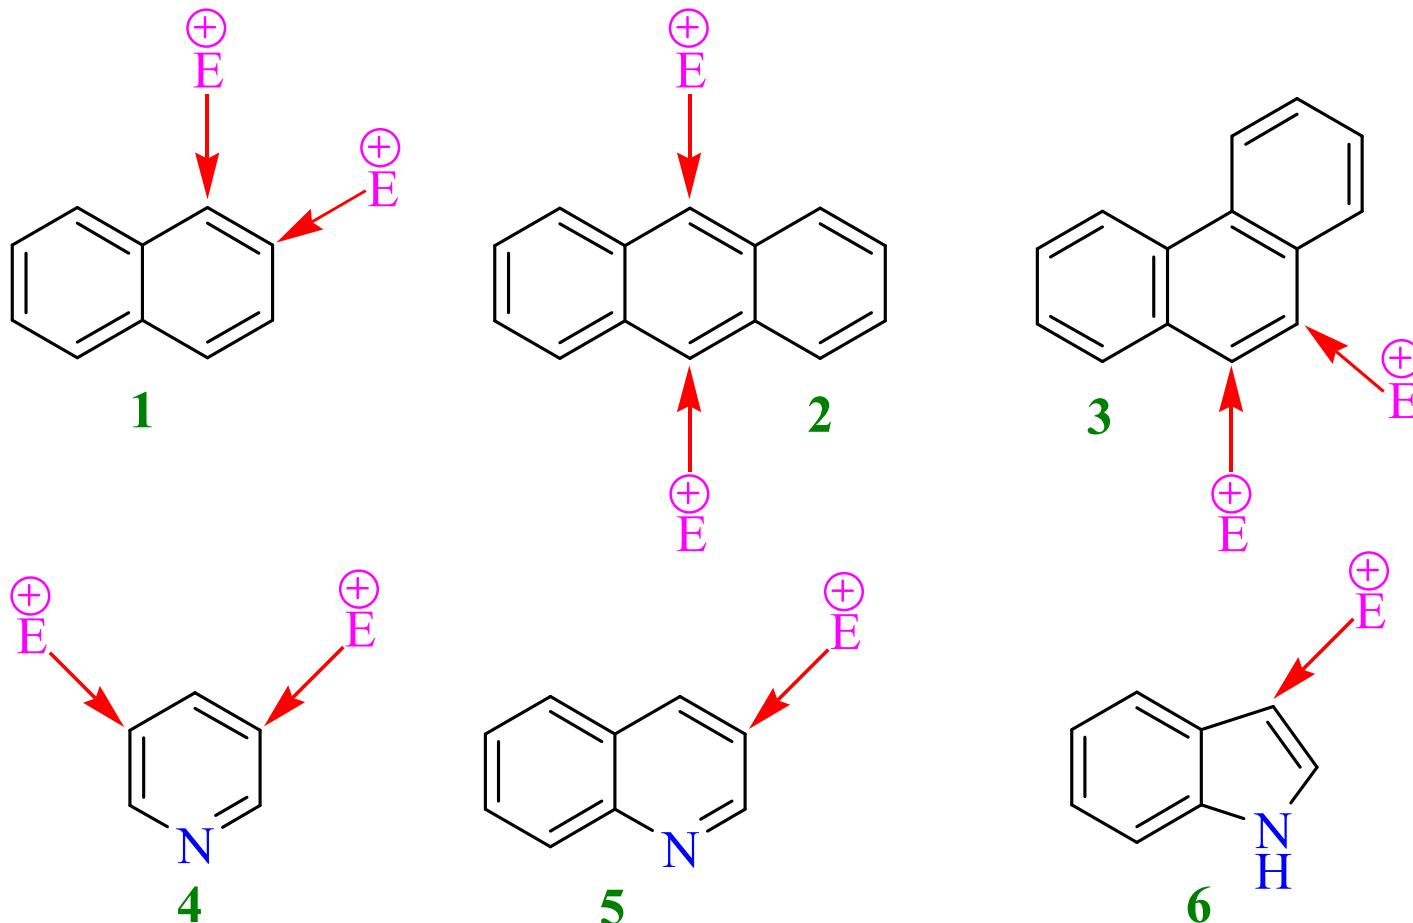

$\text{X} = \text{Cl}, \text{Br}, \text{I}, \text{SOPh}, \text{SeOPh}, \text{SO}_2\text{Ph}$ etc.

$\text{X} = \text{Cl}, \text{Br}, \text{I}$

Benzyne Mechanism

Aromatic Substrates

1 = Naphthalene

2 = Anthracene

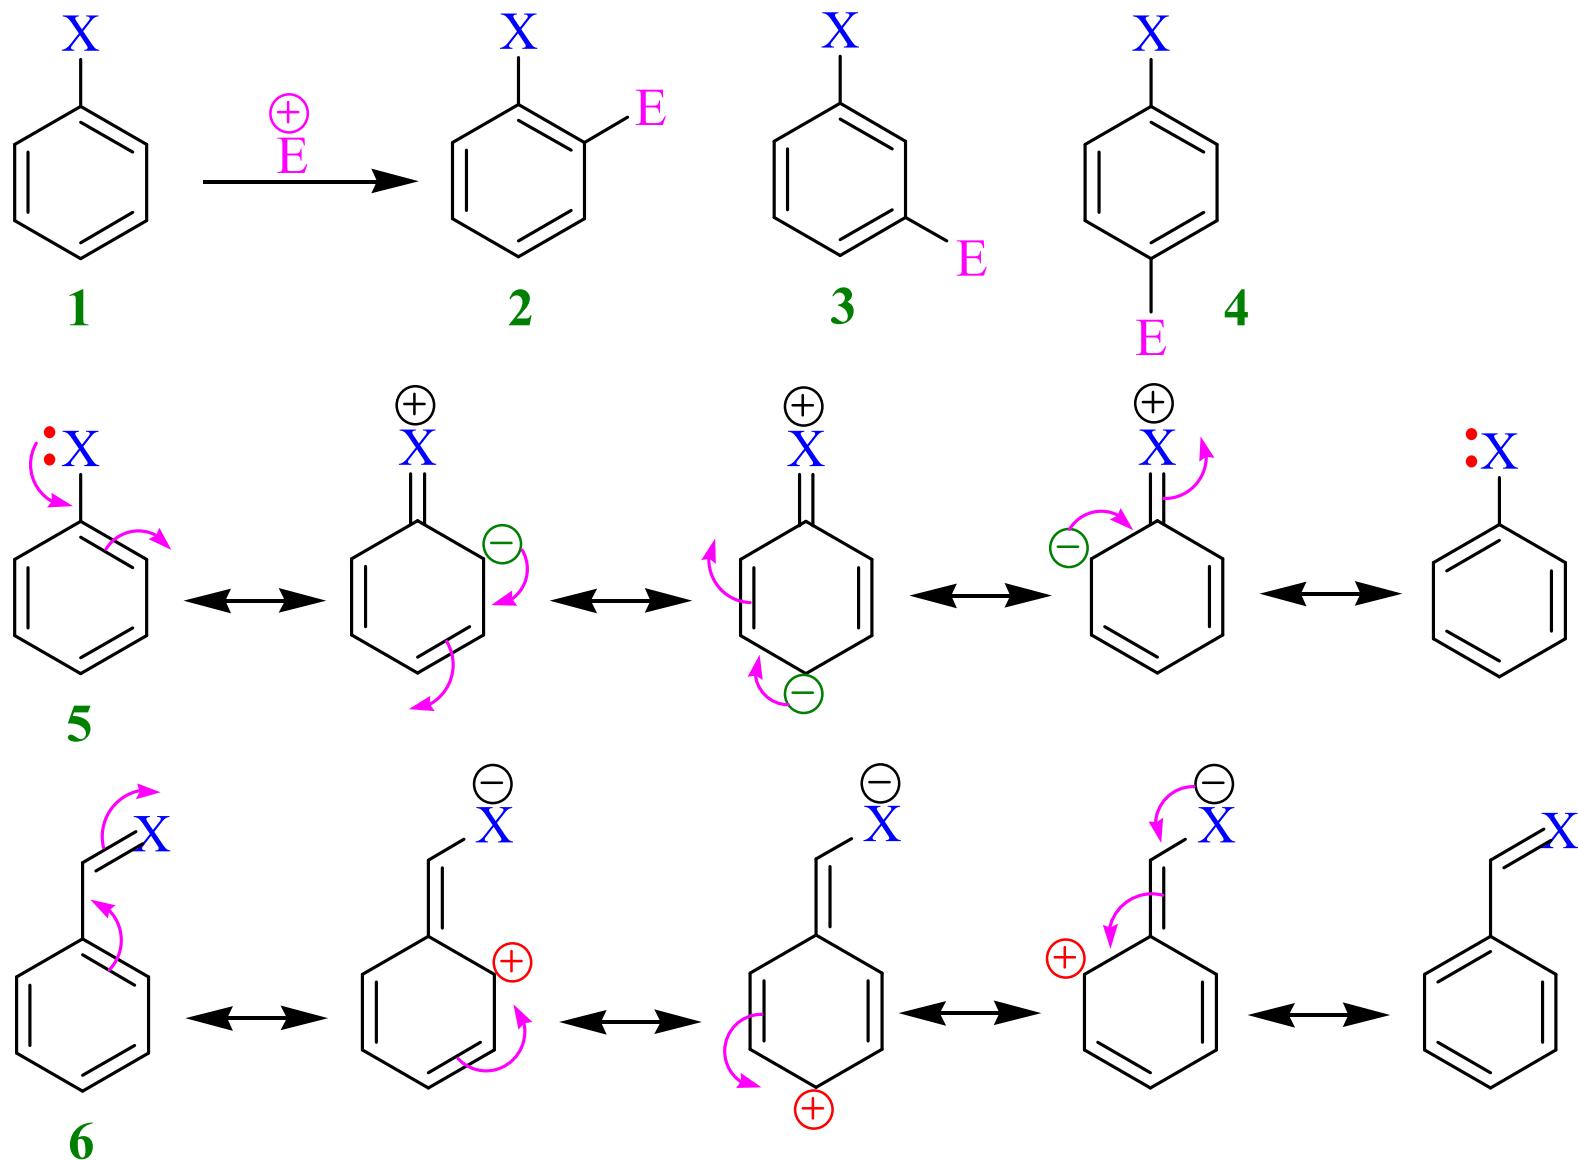

3 = Phenanthrene

4 = Pyridine (Azine)

5 = Quinolene (Benzo-1-azine)

6 = Indole (Benzo-1-azole)

Orientation of an Electrophile

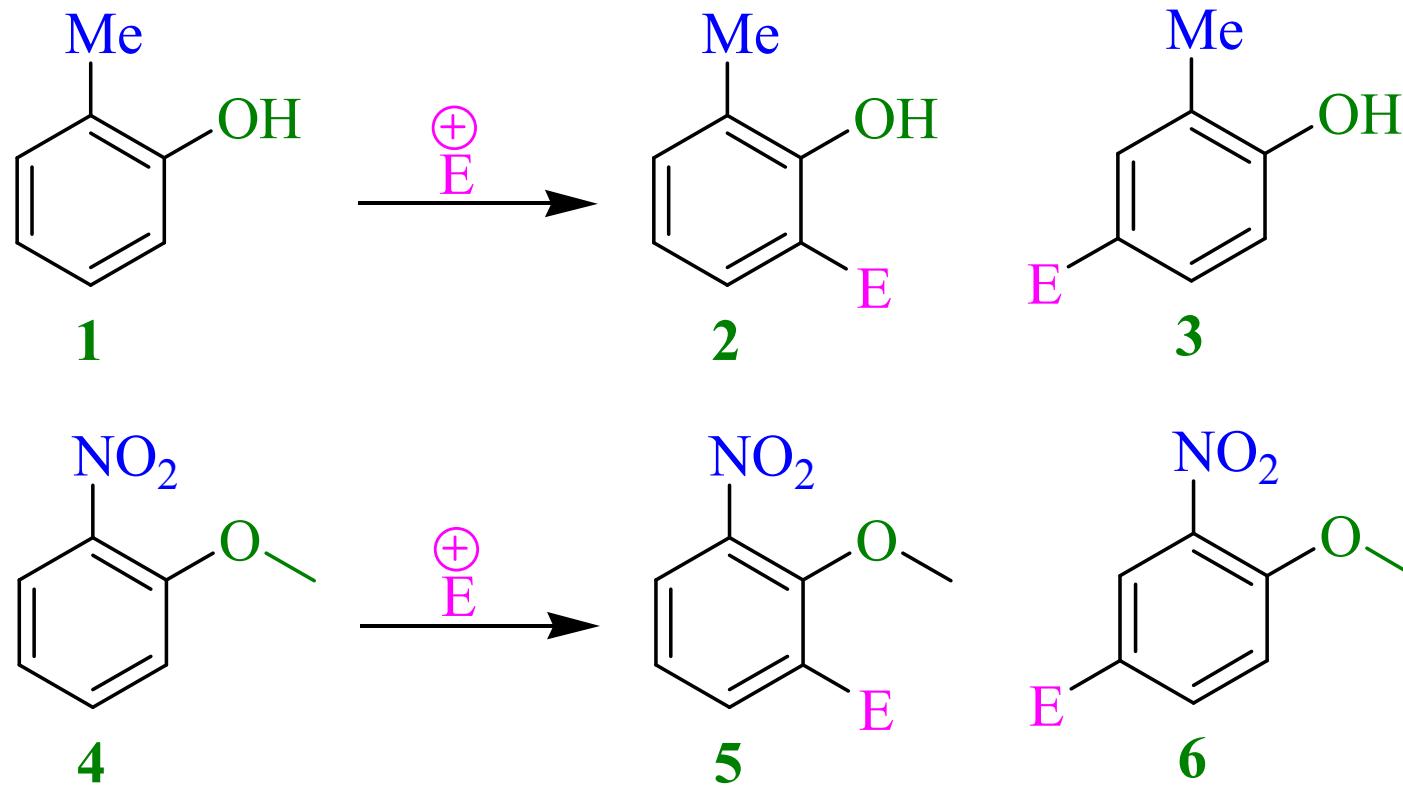

Orientation of an Electrophile

	X	I	R	Director	Ring	Examples
5	Alkyl	+I	-	<i>o / p</i>	Mild activator	Me, Et, <i>n</i> Pr, <i>i</i> Pr, <i>n</i> Bu, <i>i</i> Bu etc.
	Halogen	-I	+R	<i>o / p</i>	Mild deactivator	Cl, Br, I
	N, P, O, S	-I	+R	<i>o / p</i>	Strong activator	OH, OR, SH, SR, NH ₂ , N(H)R, NR ₂ etc.
6	O, S, N, P	-I	-R	<i>m</i>	Strong deactivator	al, one, oic acid, oate, oyl halide, amide, imine, nitro, carbazide etc.
	⁺ YR _n	-I	-	<i>m</i>	Strong deactivator	⁺ NR ₃ , ⁺ SR ₂

Rules of Orientation

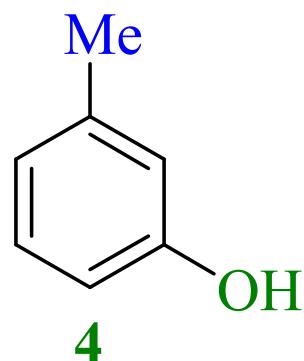

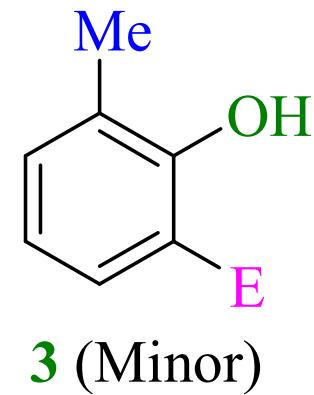

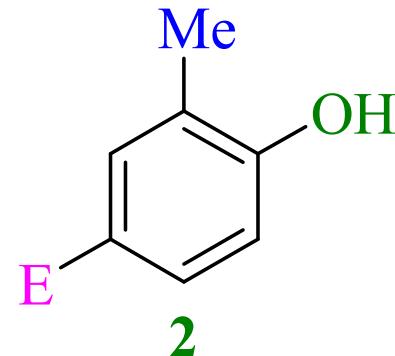

If a strongly activating group competes with a weaker one / a deactivating one; the former controls the substitution

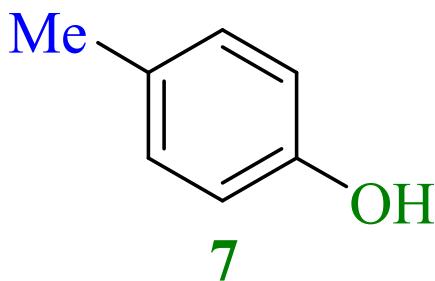

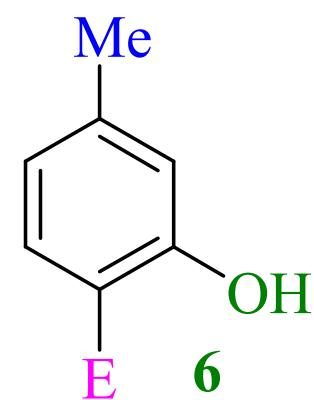

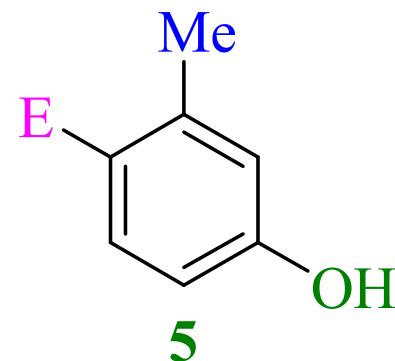

Practice

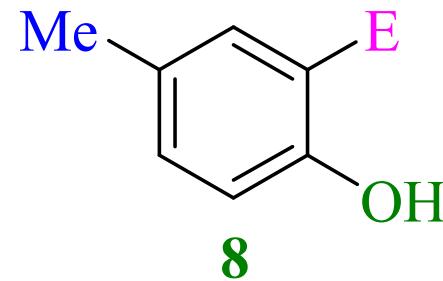

\oplus
E

\oplus
E

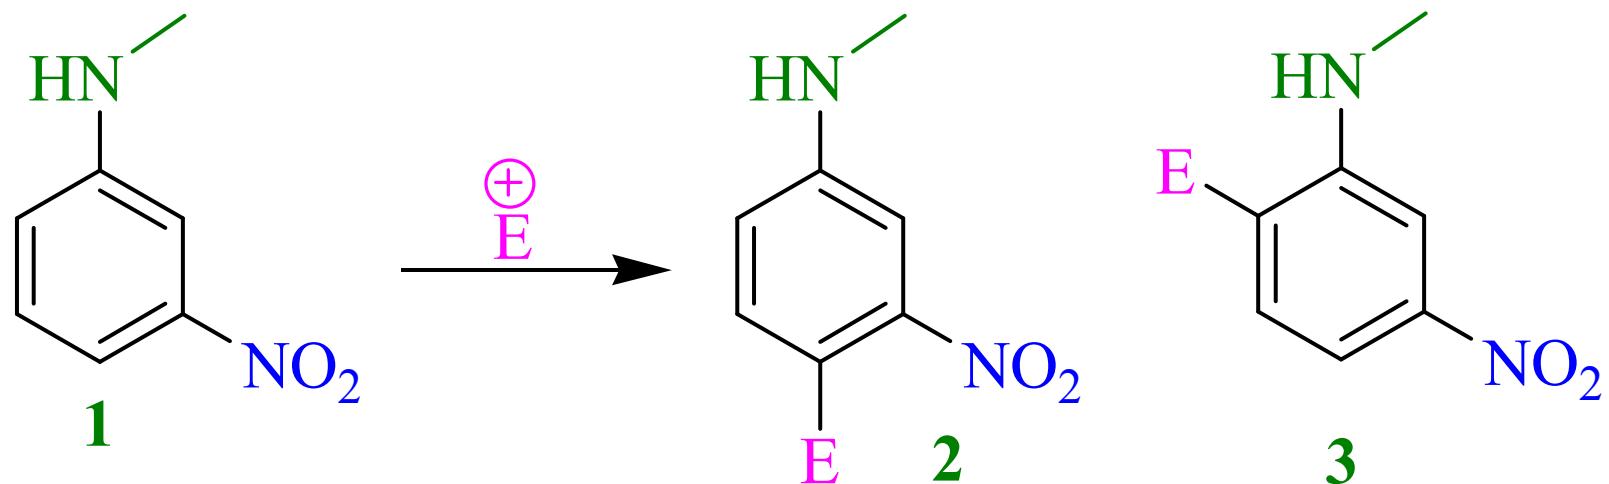

\oplus
E

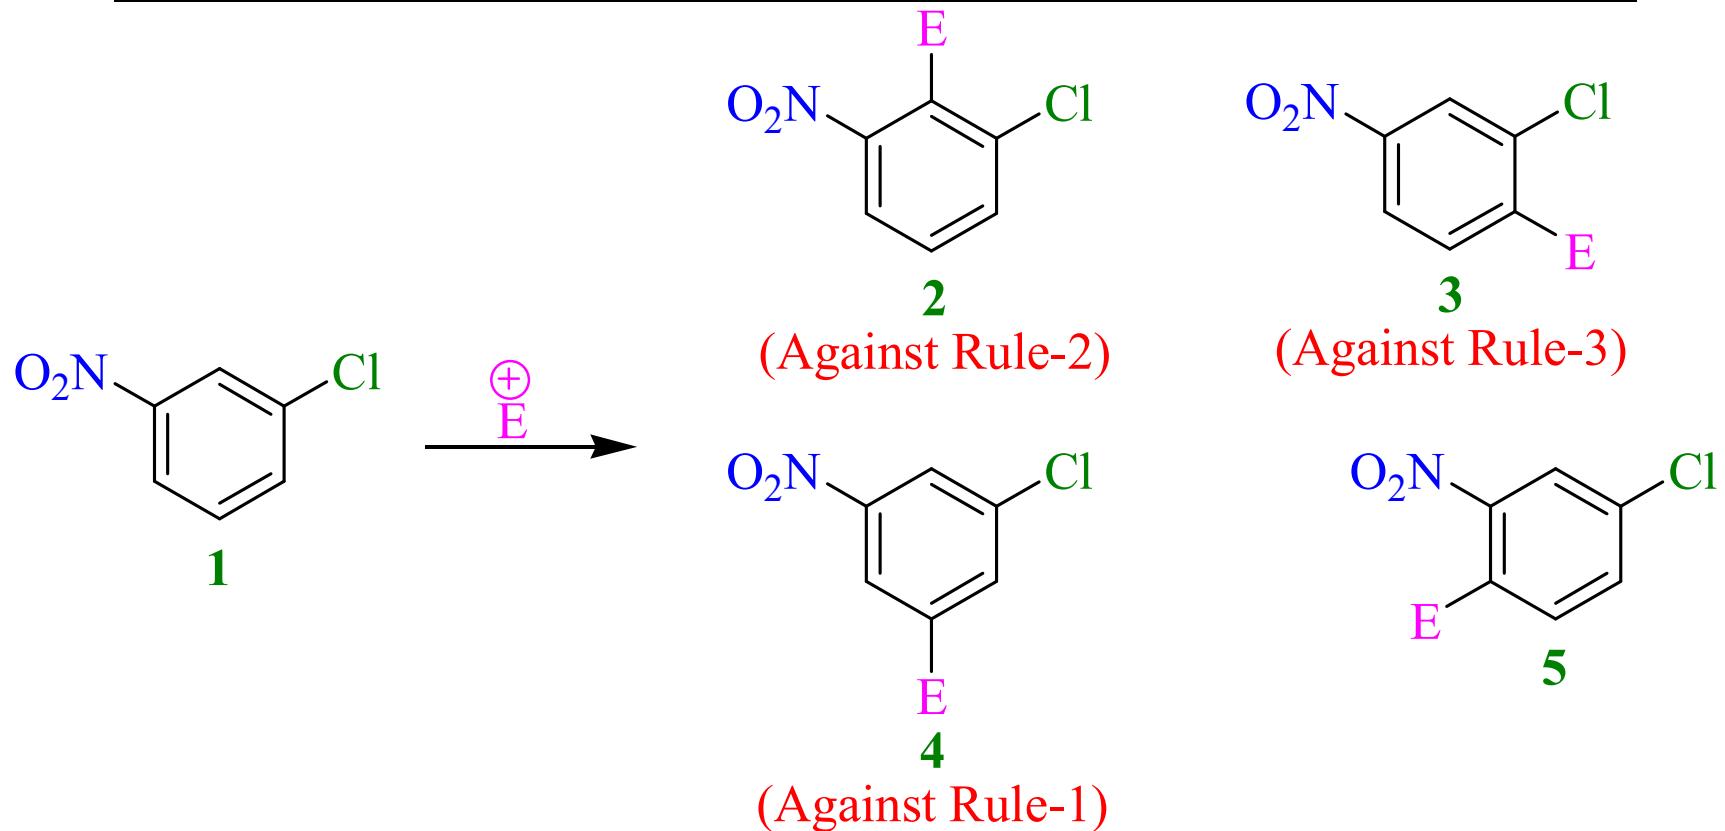

Rules of Orientation

The electrophile is least likely to approach between two groups (due to steric factor) positioned at *meta*

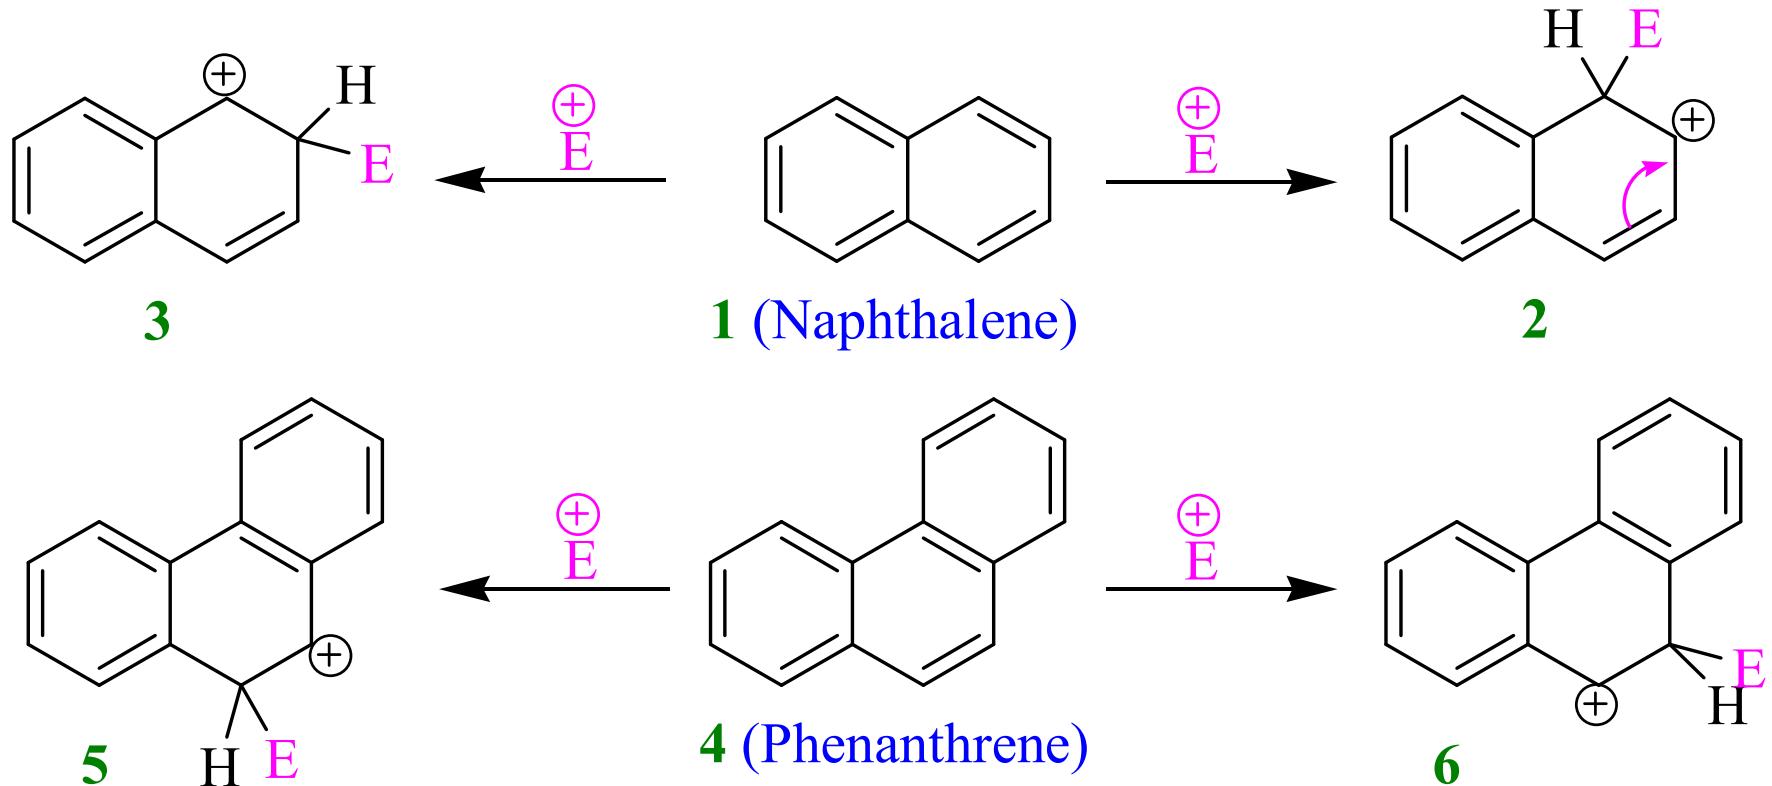

Rules of Orientation

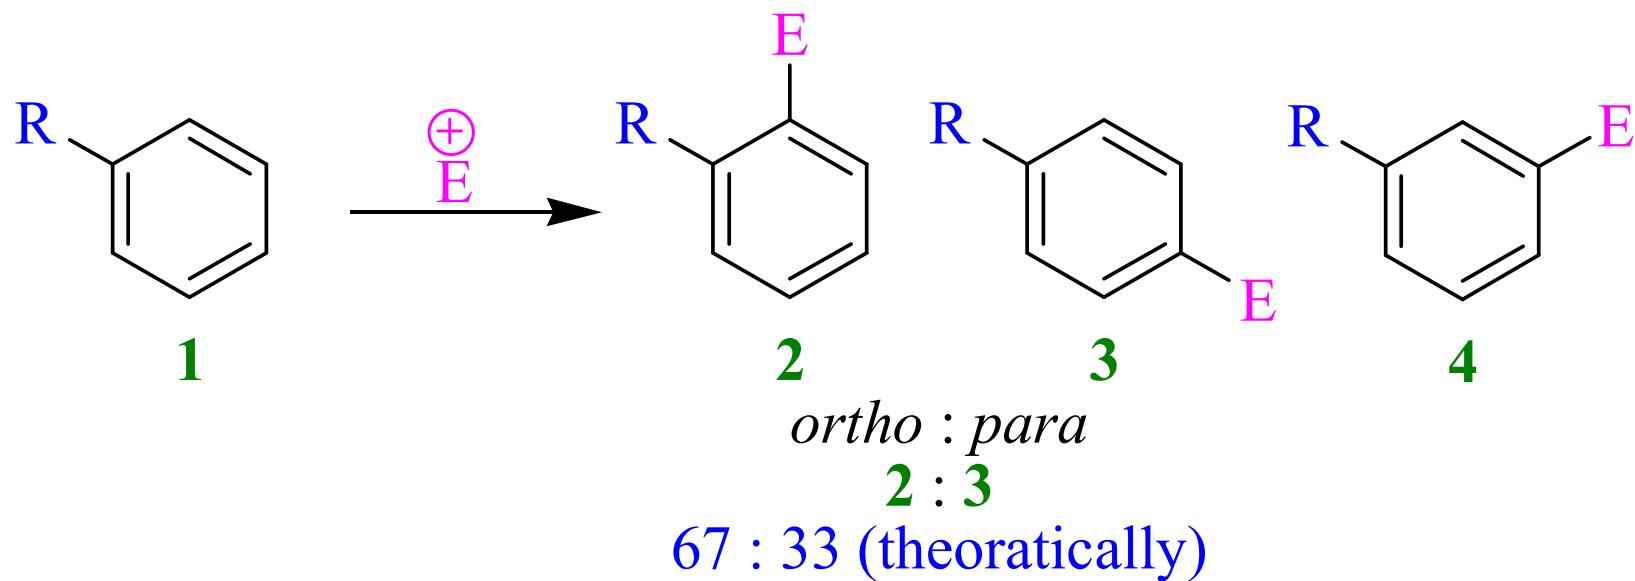

When a *m*-directing group is *m* to *o*, *p*-directing,
the approaching electrophile is oriented at *ortho*
to *m*-directing group

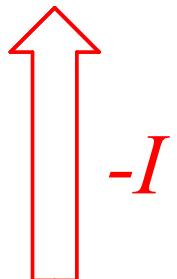

Orientation

Ortho / para Ratio

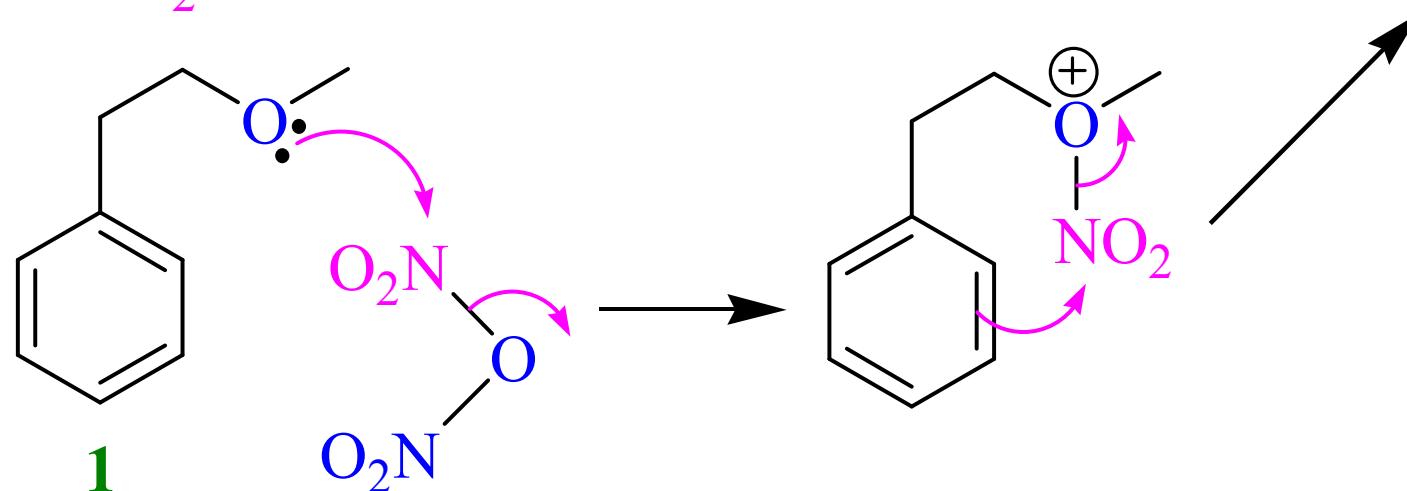

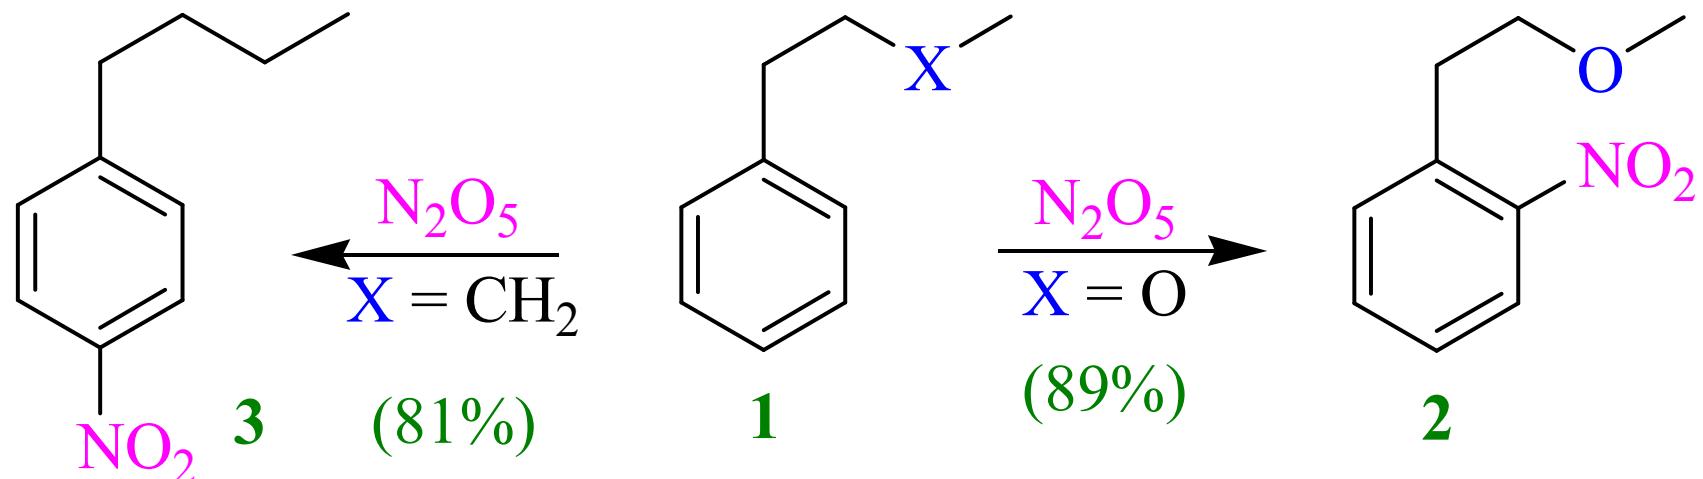

R	<i>ortho</i>	<i>para</i>
F	12	88
Cl	30	70
Br	38	62
I	41	59

*Steric
Crowding*

R	<i>ortho</i>	<i>para</i>
Me	61	39
Et	54	46
<i>n</i> Pr	38	72
<i>i</i> Pr	17	83

Ortho Effect
