## About the Book

Methodology refers to the way we approach a problem to obtain its solution which may also mean the way we conduct the research. A successful legal research will start with the understanding that research is a process. Different kinds of research or researches done under different disciplines are bound to use different methodologies, yet the basic approach towards research remains the same. The approach adopted in the research has deep impact upon the findings and the solutions offered by the research. In an attempt to bring various perspectives, dimensions, and applications of research in law together, the present volume 'Legal Research and Methodology (Perspectives, Process and Practice)' divides the subject into three parts viz. Perspectives on Legal Research, Process of Research, and Research Methodology: Practical Applications. The text is compiled in a sequence so that it meets the requirements of students, researchers and practitioners alike who often have highly varying degree of research experience and expertise. In its twenty nine chapters the book covers an extensive range of issues which make it a distinctive contribution in the field of law and research in law. The purpose of the book is to present contributions which show the realistic picture of the nuances of legal research. A lot has been written on the subject in past, however, collection of thoughts on various perspectives in addition to the general aspects of methodology was missing. The third part of the book gives prominence to the practical aspects of the different dimensions of the research methodology. The division of the book in the three parts serves a clear purpose of guiding any researcher through his or her research viz. explaining the perspective and approach to be adopted, research process to be followed and finally presenting the work in the form of writing the research outcomes. The present book promises to fulfill the demand for a comprehensive work on legal research methodology adopting an interdisciplinary perspective to be used by students of post-graduation, research scholars, teachers as well as practitioners.
