

Why The Whole World Is Not Developed?

1. Introduction:

Why the whole world is not developed? Different societies have grown in different ways in history only shifts the problem to the question why and when do societies grow? And why and when does growth stop? Poor countries have remained poor because they cannot absorb the technologies of the advanced industrialized countries. To explain this, some countries the lack of education in poor countries; others, the lack of management skills or an entrepreneurial tradition, the lack of appropriate institutions, or the economies of scale inherent in the new industrial technologies which hinder their small scale or isolated adoption.

2. Developed and Developing Societies.

To understand the difference between developed and developing societies there are multiple phases we can see to differentiate between these terms. We can look in a cultural way, moral way and in an economical way. "Developed societies are those societies which have achieved their goals and provide the best facilities to their citizens, provide them the best platforms to exercise their religions their cultural values and improve their moral values". For generals these things are to be considered the margin line between developed and developing societies.

Definitely the developing societies are those societies which are improving the standards of living styles of their citizens and providing them the best opportunities to achieve their goals.

3. The Influence of developed countries over the developing countries:

Rich and developing countries are mutually dependent. Developing countries often have resources that benefit rich countries whether it be physical resources or manpower. Rich countries want to take advantage over this and also be able to gain leverage or influence financial and political over that country. They do this by donating money, by trading in technology, by investing in infrastructure, etc.

4. Might Is Right:

Might Is Right or The Survival of the Fittest is a book by pseudonymous author Ragnar Redbeard, generally believed to be a pen name of Arthur Desmond. First published in 1896.

Might is right means people who have power succeed in proving themselves right, though they may not be right in the reality.

This happens because people have the power they can manipulate resources; they can bribe people in power and succeed in accomplish what they want. However, this type of success and achievement is called corruption.

The truth is might could be right temporarily, but in the long run only right is right. Only might is not right. In the history many powerful people tried to prove themselves right with their might; but they failed miserably. For example, Hitler tried to scare the world. He imposed on the world World War II and lakhs of people died in the war. Yet, he could not prove he was right.

5. Ways to Grown up Society.

Different societies have grown in different ways in history and time. Some societies have grown themselves by using their natural resources such as Saudi Arabia, Iran, and Iraq etc. On the other hand we can see that some societies like America, Russia, and China have grown up by developing themselves in the field of technology. Similarly we can see that some societies or countries which are not able to progress in the field of technology and natural resources they used their historical places to provide others to visit their countries to generate revenue.

6. Journey from Developing to Developed.

There is no doubt that any society moving forward must has to set a unique mark in a market. For this each and everything does matter for example Raw materials, intermediate products, favorable location, transport facilities, energy, various services, production material, supplier, products, burning markets, demands of products, hard work and educated labor and many other inputs?

6.1 First Step Accuracy.

In our surroundings we have come to know that when we have to establish our business we have to concentrate on our first step in the same way when any country or society has to move forward they have to focus on their first step.

6.2 Supply and Requirements.

After first step we have come to know that demand and supply conditions become different knowledge and experience progress general culture advances so there the new situation middle for an opportunity for new initiatives with increased knowledge and experience one may discover new raw materials for new products invent new production process improve productivity in that case growth continues.

7. Power Shifting Effects.

It is easy to understand that developed countries have more power than the developing countries. On any international forum developed countries have more influence than the developing countries. It is a bitter truth that developed countries do not want to lose their powers. They don't want to shift powers that's why

they always try to improve their industry and provide the best facilities to their citizens as compared to the developing countries.

8. Control of develop over developing:

Developed countries manipulate developing countries by influencing them different kinds of sanctions .If we look around we can see the dispute between America and Iran .America always want to manipulate Iranian government that's why America does not want Iran to build nuclear bomb and to reach them in an international market.

9. The Security Economy:

The term “security economy” is, like the concept it denotes, relatively new. It attempts to describe a kaleidoscope cluster of activities concerned with preventing or reducing risk of deliberate harm to life and property. At the broadest level, it could include all matters related to defense and counterintelligence, the public police force, private policing, armed guards, and security technology providers. In a much narrower sense, it might comprise just private spending on personal and corporate security. For the purposes of this publication, the security economy is considered to comprise principally the security industry, including its interfaces with security-related activities of governments and their agencies.

10. Lack of Technology:

There is a number of countries which are suffering from lack of technology. They still living in past. Lack of technology is the biggest drawback for any country. To move forward each and every country must has to realize the importance of technology. Those societies who have achieve their goals in technical field they have succeeded to provide the best living standards of their citizens and to control the economy of others by different kinds of moods.

11. World Politics:

In a world politics we have come to know that those countries which are economically strong can decide the fates of the developing countries. When we look around we can see multiple examples such as Kashmir Issue, Palestine Issue, Iran, Iraq and Afghanistan issue where we can easily see the dominant power of developed countries over the developing countries. We can see the human rights violation of India in Kashmir but no one is helping Kashmiri's because India is the biggest market for the developed countries to improve their businesses.

12. Greed of Oil, Fuel wealth:

Now a days in the modern century Oil pay a vital role in the race of development. Every county running to achieve Oil resources. Basically oil is the great blessing by the God but now in the modern world it has become a curse between the countries. We can see such type of conflict between Iran Iraq, Iraq Kuwait etc. These wars are very important in worsening the economic condition of these countries. We can see many wars that ware fought between the states over a long time because of oil resources. That countries which are rich in oil resources, their entire economy depend on oil resource that is not enough for their public.

13. Natural Disasters:

Natural disasters have been increase as well compare with the past decades. Every year almost approximately 90,000 people are die due to the natural disasters such as flood, earthquake and tornados destroys many things that damage the country economically. Such as in Pakistan (an under developing country) flood destroy the crops that was the great economic disaster for Pakistan. Natural disasters directly or indirectly impacts on global economy. As well as earth quake have serious impact on the economy. It damage the infrastructure such as roads, railway tracks, buildings human lives. In 1981 flu pandemic was natural disaster it killed 50 million people all over the world. It impact on the world's economy there were shortage of workers almost 40 % to 70 % factories were closed due to lack of workers. As well as now we are facing same situation in the shape of corona virus pandemic. We are facing financial crisis and we are also losing human lives. It will leave huge economic gap that will be cover in the years.

14. Occupied territories In the World:

In the 21st century there is approximately more than 100 notations, countries or territories that are celebrate their independence day every year. Independence Day holiday considered the most common holiday in the world town. Similarly there is a lot of countries or territories are not enjoying such type of feelings they are yet under occupation. That are Palestine, Kashmir, Kurdistan, and Kabila. We can see many wars because of land it is the great reason for the lack of prosperity. We have seen countries fight for land over the. Such countries became weak economically. It is the reason that the whole world cannot become developed.

15. Education:

Education play an important role in the development of any country or territory but unfortunately there are many countries in the world that not have enough educational facilities for their people. It is the hurdle in the prosperity of that country. Lack of education there is no awareness in the public about their rights, how to spend life, what's their responsibilities etc. More schools, and more academic education will certainly help a country progress. Yet, more education will not automatically solve all problems of the LED countries. Education is usually universally seen as the means to cure all types of national problems. Better educated people tend to earn more, have fewer children, contribute more to the national economy, are of more use to the government, and, best of all, are more likely to have educated children.

16. Conclusion:

In a nut shell it is clear from above description that it's not possible to be on the same point for each and every society. There must be some differences which are based on economy, cultural and leadership etc. Every human being has different qualities. Differences are made by Allah Almighty. If every society become developed society then that will be the end of the world, for continues moving we must need goals, directions. If any society become the perfect society and then they nothing to achieve, they have nothing struggle then obviously the whole society become dead. Oil politics competition is a huge reason to create hurdles among the countries or territories. The race of development and to become more and more powerful than others is very important for human race. So, there must be some developed countries and some developing countries and it is not possible for the whole world to become developed world.
