# Notifications in Android

By: AbuBakar Ubaid

ANDROID

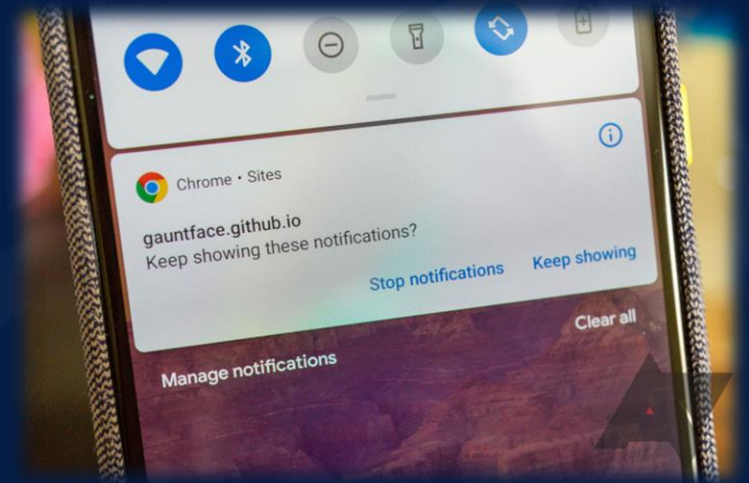

How can we send/receive a Notification

# What is a Notification?

A **notification** is a message that **Android** displays outside your app's UI to provide user with reminders, communication from other people, or other timely information from your app

Users can tap the **notification** to open your app or take an action directly from the **notification**

# Notifications

- In **Android Oreo API-26**, sending a notification is bit difficult
  - Because now we have to define Notification-Channel for each notification

## Purpose:

give more fine controls to the user about what notification he want to be receive

How much noise they are allowed to make

“Notifications”

THANK YOU 😊
