

Theories of Personality

EXPECTED LEARNING OUTCOMES

After studying this chapter, you are expected to:

1. define personality;
2. identify the various perspectives on studying personality;
3. discuss some concepts in Psychoanalytic Theory such as instincts and libido, the id, ego and superego, and the defense mechanisms;
4. explain how personality develops;
5. distinguish the other psychoanalytic theory of Freud; and
6. know the current personality theories.

Personality

"Characteristic pattern of thinking, feeling and acting."

Four major perspectives on Personality

Psychoanalytic - unconscious motivations

Trait - specific dimensions of personality

Humanistic - inner capacity for growth

Social-Cognitive - influence of environment

Psychoanalytic Perspective

“first comprehensive theory of personality”

Sigmund Freud

(1856-1939)

Specialized in Nervous
Disorders

**Some patients' disorders
had no physical cause!**

University of Vienna 1873
Voracious Reader
Medical School Graduate

Psychoanalytic Perspective

“first comprehensive theory of personality”

Q: What caused neurological symptoms in patients with no neurological problems?

Hypnosis

Unconscious

“Psychoanalysis”

Free
Association

The Unconscious

“the mind is like an iceberg - mostly hidden”

Conscious Awareness

small part above surface
(Preconscious)

Unconscious

below the surface
(thoughts, feelings,
wishes, memories)

Repression

banishing unacceptable
thoughts & passions to
unconscious

Dreams & Slips

Freud & Personality Structure

“Personality arises from conflict twixt aggressive, pleasure-seeking impulses and social restraints”

Satisfaction
without the guilt?

Freud & Personality Structure

Id - energy constantly striving to satisfy basic drives
Pleasure Principle

Ego - seeks to gratify the Id in realistic ways
Reality Principle

Super Ego
- voice of conscience
that focuses on how
we *ought* to behave

Freud & Personality Development

“personality forms during the first few years of life, rooted in unresolved conflicts of early childhood”

Psychosexual Stages

Oral (0-18 mos) - centered on the mouth

Anal (18-36 mos) - focus on bowel/bladder elim.

Phallic (3-6 yrs) - focus on genitals/“Oedipus Complex”
(Identification & Gender Identity)

Latency (6-puberty) - sexuality is dormant

Genital (puberty on) - sexual feelings toward others

Strong conflict can **fixate** an individual at Stages 1, 2 or 3

Defense Mechanisms

When the inner war gets out of hand, the result is **Anxiety**

Ego protects itself via **Defense Mechanisms**

Ego

Id

Super
Ego

Defense Mechanisms reduce/redirect anxiety by distorting reality

Defense Mechanisms

- **Repression** - banishes certain thoughts/feelings from consciousness (underlies all other defense mechanisms)
- **Regression** - retreating to earlier stage of fixated development
- **Reaction Formation** - ego makes unacceptable impulses appear as their opposites
- **Projection** - attributes threatening impulses to others
- **Rationalization** - generate self-justifying explanations to hide the real reasons for our actions
- **Displacement** - divert impulses toward a more acceptable object
- **Sublimation** - transform unacceptable impulse into something socially valued

The Unconscious & Assessment

How can we assess personality?
(i.e., the unconscious)

Objective Tests?

No - tap the conscious

Projective Tests?

Yes - tap the unconscious

Thematic Apperceptions Test (TAT)
Rorschach Inkblot Test

Evaluating the Psychoanalytic Perspective

Were Freud's theories the "best of his time" or were they simply incorrect?

Current research contradicts many of Freud's specific ideas

Development does not stop in childhood

Slips of the tongue are likely competing "nodes" in memory network

Dreams may not be unconscious drives and wishes

Freud's Ideas as Scientific Theory

Theories must explain observations and offer testable hypotheses

Few Objective Observations

Few Hypotheses

(Freud's theories based on his recollections & interpretations of patients' free associations, dreams & slips o' the tongue)

Does Not PREDICT Behavior or Traits

Trait Perspective

No hidden personality dynamics...
just basic personality dimensions

Traits - people's characteristic behaviors & conscious motives

How do we describe & classify different personalities?
(*Type A vs Type B or Depressed vs Cheerful?*)

Myers-Briggs Type Indicator - classify people
based upon responses to 126 questions

Are There “Basic” Traits?

What trait “dimensions” describe personality?

Combination of 2 or 3
genetically determined
dimensions

Extraversion/Introversion
Emotional Stability/Instability

Expanded set of factors
“The Big 5”

The Big Five

Emotional Stability

- Calm/Anxious
- Secure/Insecure

Extraversion

- Sociable/Retiring
- Fun Loving/Sober

Openness

- Imaginative/Practical
- Independent/Conforming

Agreeableness

- Soft-Hearted/Ruthless
- Trusting/Suspicious

Conscientiousness

- Organized/Disorganized
- Careful/Careless

Assessing Traits

How can we assess traits?

(aim to simplify a person's behavior patterns)

Personality Inventories

MMPI ([Minnesota Multiphasic Personality Inventory](#))

- most widely used personality inventory
- assess psychological disorders (not normal traits)
- empirically derived - test items selected based upon how well they discriminate between groups of traits

The Humanistic Perspective

**Maslow's
Self-Actualizing
Person**

**Roger's
Person-Centered
Perspective**

**“Healthy” rather than “Sick”
Individual as greater than the sum of test scores**

Maslow & Self-Actualization

Self-Actualization

the process of fulfilling our potential

- Studied healthy, creative people
- Abe Lincoln, Tom Jefferson & Eleanor Roosevelt
- Self-Aware & Self-Accepting
- Open & Spontaneous
- Loving & Caring
- Problem-Centered not Self-Centered

Roger's Person-Centered Perspective

People are basically good
with actualizing tendencies.

*Given the right environmental
conditions, we will develop
to our full potentials*

Genuineness, Acceptance, Empathy

Self Concept - central feature
of personality (+ or -)

Assessing & Evaluating the Self

Primarily through questionnaires in which people report their self-concept.

Also by understanding others' subjective personal experiences during therapy

Concepts are vague & subjective.
Assumptions are naïvely optimistic.

Social-Cognitive Perspective

**Behavior learned through
conditioning & observation**

**What we think about our situation
affects our behavior**

**Interaction of
Environment & Intellect**

Reciprocal Determinism

**Personal/
Cognitive
Factors**

**Environment
Factors**

Behavior

Internal World + External World = Us

Personal Control

Internal Locus of Control

You pretty much control your own destiny

External Locus of Control

Luck, fate and/or powerful others control your destiny

Methods of Study

- Correlate feelings of control with behavior
- Experiment by raising/lowering people's sense of control and noting effects

Outcomes of Personal Control

Learned Helplessness

Uncontrollable
bad events

Perceived
lack of control

Generalized
helpless behavior

Important Issue

- Nursing Homes
- Prisons
- Colleges
