

Chapter 4

Applied Seismology: introduction and principles

4.1	Introduction	212
4.2	Seismic waves	215
4.2.1	<i>Stress and strain</i>	215
4.2.2	<i>Types of seismic waves</i>	215
4.2.3	<i>Seismic wave velocities</i>	220
4.3	Raypath geometry in layered ground	224
4.3.1	<i>Reflection and transmission of normally incident rays</i>	224
4.3.2	<i>Reflection and refraction of obliquely incident rays</i>	228
4.3.3	<i>Critical refraction</i>	230
4.3.4	<i>Diffractions</i>	231
4.4	Loss of seismic energy	234
4.4.1	<i>Spherical divergence or geometrical spreading</i>	234
4.4.2	<i>Intrinsic attenuation</i>	234
4.4.3	<i>Scattering</i>	236
4.5	Seismic Energy Sources	238
4.5.1	<i>Impact devices</i>	239
4.5.2	<i>Impulsive sources</i>	242
4.5.3	<i>Explosive sources</i>	243
4.5.4	<i>Non-explosive sources</i>	245
4.5.5	<i>High-resolution water-borne sources</i>	252
4.5.6	<i>Vibrators</i>	254
4.6	Detection and recording of seismic waves	264
4.6.1	<i>Geophones and accelerometers</i>	264
4.6.2	<i>Hydrophones and streamers</i>	269
4.6.3	<i>Seismographs</i>	273
