The purpose of this course is to introduce e-commerce applications, its impacts on business processes, and key technologies used in the development of web-based business information systems and applications. It reviews foundations of e-commerce, its infrastructure, current business models, security, web site design strategies, payment systems, and various related issues. The course covers every step of the design and building process involved in creating a powerful, extendable E-commerce website. A major part of the course will be devoted to hands-on practices covering client-side and server-side applications in web-based business information systems.
